PRESSUP

DESIGN SYSTEM.

FOR REVIEW ○ 25 OCTOBER 2026 ○ DARK AND LIGHT THEMES

PressUp

Challenge, motivate, succeed. Bold where it counts, calm where you lift.

1 BRAND BOOK
2 COLOUR
3 TYPE AND SCALE

5 EXAMPLE SCREENS
6 LOGO AND ASSETS

BRAND BOOK

PressUp is a fitness app for workout tracking and guided programmes, with a website that sells it. It's for everyone from first-timers to committed lifters, so the brand works in two registers: **loud brand moments** that look like the posters, and **calm working screens** for when someone is mid-set with a barbell in their hands.

VOICE

The tagline is **Challenge · Motivate · Succeed**. Every piece of copy should do one of those three.

- **Headlines** are short, imperative, all caps in Anton, and end with a full stop: "TAKE THE FIRST STEP." "FOCUS." "LOCKED IN". One to four words.
- **Values** go in brackets: `[ DISCIPLINE ]`. One word, used as a programme name or weekly theme.
- **Body copy** is plain, second person, encouraging. Say what to do and why: "Lower the bar to mid-chest, pause, then press." Don't shame. The posters' "separates winners from losers" is fine for a campaign, but never in the app.
- **Coaching cues** are imperative and physical: "Brace. Drive through your heels."
- Use British English. Units are kg, km and min. Sets × reps are written "4 × 8" with a multiplication sign. Numbers are always figures.
- Buttons are verbs: "Start workout", "Log set", "Join programme". No exclamation marks, no emoji.
- In running text the name is **PressUp**. The wordmark is the only place it appears as PRESSUP.

TWO REGISTERS

	BRAND MOMENTS	WORKING SCREENS
Where	Website, onboarding, splash, workout complete, new PR, programme start, social	Today, workout logging, rest timer, history, settings
Type	`display-xl` / `display-l`, `EchoHeadline`, `BracketTitle`	One `display-m` or `heading` per screen, then `title`, `body`, `stat`
Colour	Black, black-and-white photography, lots of yellow type	`surface` and `surface-raised`; yellow only for the primary action, progress and the current set
Graphics	`Rings`, the figures pattern, photography	None. Content only.

When in doubt, a screen someone uses mid-workout is a working screen.

COLOUR

- **Dark is the default theme** and matches the posters. Light exists for the in-app setting and for accessibility, and is a full theme, not an afterthought. The website is dark only.
- `press-yellow` is the brand. On working screens it covers no more than about 10% of the screen: the primary `Button`, the active tab, `ProgressRing` arcs, `pr` badges. On brand moments it can carry all the type.
- Text and icons on a `press-yellow` fill are always `on-yellow`, never white.
- For yellow as text, use `accent`, not `press-yellow`. Raw yellow on a light ground is only 1.2:1, so on light `accent` is ink and sits on a yellow fill instead: `accent-highlight` behind bracket titles, `accent-soft` behind the current set, highlighted stats and the active tab. Yellow stays the lead colour in both themes.
- `EchoHeadline` is the exception: it stays press-yellow in both themes, just on the light ground. It's decorative brand type, so never let it carry information on its own.

- Progress arcs use `accent-line` (press-yellow in both themes) over `ring-track`, which is dark on light so the arc reads.
- Status: `success` (teal) and `danger` (coral) are told apart by lightness and hue, never colour alone. Every status also carries an icon or a word (`Badge` does this for you).
- Neutrals carry a slight warm-yellow bias (`line`, `ink-muted`) so greys sit with the yellow instead of looking cold.

TYPE

Three Google Fonts, chosen to match the posters:

- **Anton** (`--font-display`) is the condensed poster headline face, always uppercase. `display-xl` to `heading`. Never below 22px, and never for more than one line of a sentence.
- **Barlow Condensed** (`--font-condensed`) is for anything counted or pressed. `stat-xl` and `stat` for numbers (always `font-variant-numeric: tabular-nums` so values don't jump as they change). `label` for buttons, tabs and the tagline. `overline` for eyebrows and units. Labels are uppercase with letter-spacing.
- **Jost** (`--font-sans`) is the geometric body face, close to the posters' paragraph copy. `title`, `body`, `body-sm`, `caption`. Sentence case.

If the brand later licenses its own faces (e.g. Helvetica Neue Condensed and Avenir Next), swap the three family stacks and keep the style names.

GRAPHIC DEVICES

All of these come from the posters. Use them only in brand moments.

- **Rings** (`Rings`): two to four concentric hairlines in `accent` at `ring-faint`, centred on the subject.
- **Brackets** (`BracketTitle`): `[ ONE WORD ]`.
- **Echo** (`EchoHeadline`): a headline repeated and fading through `echo-1` … `echo-5`, with a cut-out athlete crossing it.
- **Blur echo**: on posters, a large blurred word behind a small sharp one ("FOCUS."). It's print and social only; don't use it in UI.
- **The ring dot** separates words in the tagline and metadata. It's the logo's head, never a plain bullet.
- **Figures pattern** (assets → Graphics): onboarding, empty states, footer, merch.

LOGO

See assets → Logos. Use `pressup-wordmark-on-dark` by default. On light surfaces use `on-light` at 32px tall or more, and `mono-black` below that. Keep clear space equal to the ring's height. The P mark alone is the app icon: yellow arc and white P on `#0a0a0a`.

SHAPE, SPACE, DEPTH

- Controls are pills (`radius-pill`), echoing the logo's round caps. Cards use `radius-md`, sheets and programme cards `radius-lg`, inputs and set rows `radius-sm`.
- Spacing is on a 4px base. On phones, gutters are `space-5` and sections `space-6` – `space-8` apart. On the web, gutters are `space-10`, sections `space-16` apart, and content is at most 1200px wide.
- Separate things with surface steps (`surface` → `surface-raised` → `surface-sunken`), not borders or shadows. `shadow-float` is only for things that float: the tab bar, sheets and the timer overlay.
- Lines are `stroke-hairline` for rings and dividers, `stroke-icon` for icons and `stroke-ring` for progress arcs, all with round caps.

MOTION

Quick and physical: 120–200ms ease-out for presses and toggles, and 400ms for a progress arc filling. Celebrate a PR with one moment (the arc completes, the badge scales in), not confetti. Never loop decorative motion. With `prefers-reduced-motion`, swap movement for an instant change.

ICONOGRAPHY

The brand had no icon set, so `Icon` is a small set drawn to match the logo: 24px grid, 2px stroke, round caps and joins, `currentColor`. When you need an icon it doesn't have, use **Lucide** at `stroke-width: 2` with round caps. It's the closest public match. This is a substitute, so flag new icons for review. No emoji, and no filled icon styles.

ACCESSIBILITY

- Every text token's note names the grounds it's checked on, at 4.5:1 or better in both themes. Control borders (`line-strong`) are 3:1.
- Focus is `focus-ring` : a solid 2px outline 2px off the element, yellow on dark and ink on light.
- Tap targets are at least 40px; in-workout controls are 48px or more.
- Status is never colour alone.

USING THIS SYSTEM

Components are React 18 function components on `window.PressUp` (`components/bundle.js`), styled by `components/bundle.css` , which also loads the three Google Fonts. Tokens are CSS custom properties (`--surface` , `--accent` , `--space-5` , `--radius-pill` …) with `dark` as the default theme and `light` under `[data-theme="light"]` . The example screens (TodayScreen, WorkoutScreen, WebHero) show the system assembled.

COLOUR

LEFT: DARK THEME RIGHT: LIGHT THEME

surface
`#0a0a0a / #fafaf6`

Page and screen background. Dark is the brand's home: black like the posters.

surface-raised
`#161615 / #ffffff`

Cards, sheets, list rows and the tab bar, on surface.

surface-sunken
`#000000 / #f0efe7`

Inputs, steppers, photo frames and the set table's rows; sits inside surface-raised.

line
`#2c2b26 / #e2e0d4`

Hairline dividers between rows. Decorative only, never the only edge of a control.

line-strong
`#6b6858 / #8f8c7e`

Borders of inputs, secondary buttons and unselected chips (3:1 on surface and surface-raised in both themes).

ink
`#fafaf7 / #0e0e0e`

Primary text and the white strokes of the wordmark, on surface, surface-raised and surface-sunken.

ink-muted
`#a6a496 / #5c5a50`

Secondary text: units, previous-set values, captions, on surface and surface-raised.

press-yellow
`#f5ec61`

The brand yellow, sampled from the logo's arc. Primary button fills, the active tab pill, PR badges and the logo itself. Same in both themes; on light grounds use it as a fill only, never as text or a thin line.

on-yellow
`#0e0e0e`

Text and icons on a press-yellow fill (the primary button label). Never white.

accent
`#f5ec61 ← press-yellow / #0e0e0e`

Accent text: the active tab label, ghost buttons, [bracket] titles, the current set number. Press-yellow on dark; ink on light, where it sits on a press-yellow fill (accent-highlight or accent-soft) so the yellow still leads.

accent-soft
`#2a2914 / #f5ec61 ← press-yellow`

Ground behind accent text: the current set row, highlighted stat tiles, the active tab pill. A dark yellow tint on dark; full press-yellow on light, with accent (ink) text on it.

accent-highlight
`rgba(245, 236, 97, 0) / #f5ec61 ← press-yellow`

The yellow band behind BracketTitle. Clear on dark, where the type itself is yellow; press-yellow on light, behind ink type.

accent-line
`#f5ec61 ← press-yellow`

Progress arcs: ProgressRing and RestTimer. Press-yellow in both themes, always drawn over ring-track.

ring-track
`#2c2b26 ← line / #2c2b26`

The unfilled track under a progress arc. On light it is a dark warm grey so the yellow arc reads (12:1).

success
`#4fd1c5 / #0b7468`

Completed sets and on-track states. Teal rather than green so it stays apart from danger for colour-blind users. Always paired with a tick or a word.

success-soft
`#0f2b28 / #dff4f1`

Ground behind success text and the completed set row.

danger
`#ff7a59 / #b23317`

Missed sessions, failed reps, destructive actions. Always paired with an icon or a word.

danger-soft
`#331a12 / #fbe6df`

Ground behind danger text.

focus-ring
`#f5ec61 ← press-yellow / #0e0e0e`

Keyboard focus: a 2px ring, 2px off the element. Yellow on dark, ink on light.

scrim
`rgba(0, 0, 0, 0.55) / rgba(0, 0, 0, 0.45)`

Over black-and-white photography so ink and accent type stay legible (programme cards, web hero).

TYPE AND SCALE

display-xl

`Display · 96px / 0.9 · 400`

Website hero and campaign headlines only. Ends with a full stop.

TAKE THE FIRST STEP.

---

display-l

`Display · 64px / 0.92 · 400`

App moment screens: workout complete, new PR, programme start.

LOCKED IN

---

display-m

`Display · 40px / 0.95 · 400`

Screen titles and [bracket] titles on programme cards.

[DISCIPLINE]

---

heading

`Display · 26px / 1.05 · 400`

Card titles and workout names.

PUSH DAY A

---

stat-xl

`Condensed · 72px / 1 · 700`

Rest timer and the hero number on a stat screen. Tabular figures.

01:30

---

stat

`Condensed · 34px / 1 · 700`

Stat tiles and the weight and reps values in the set logger. Tabular figures.

142.5

---

label

`Condensed · 16px / 20px · 700`

Buttons, the tagline, tab labels. Always uppercase.

START WORKOUT

---

overline

`Condensed · 13px / 16px · 600`

Eyebrows above headings, table headers, units beside a stat. Always uppercase.

WEEK 3 · SESSION 2

---

title

`Text · 20px / 28px · 500`

Exercise names and list-row titles.

Barbell bench press

---

body

`Text · 16px / 24px · 400`

Instructions, descriptions and most running text.

Lower the bar to mid-chest, pause, then press up and slightly back.

body-sm Last time: 4 × 8 at 80 kg

`Text · 14px / 20px · 400`

Secondary lines in rows and cards.

caption Synced 2 min ago

`Text · 12px / 16px · 400`

Timestamps, footnotes, chart axes.

SPACING

space-1	4px	Icon-to-label gap, tight stacks.
space-2	8px	Between chips; inside small badges.
space-3	12px	Set row padding; stat label to value.
space-4	16px	Card padding (compact), gaps between rows.
space-5	20px	Phone screen side gutter; card padding.
space-6	24px	Between card groups.
space-8	32px	Between sections on a screen.
space-10	40px	Web side gutter; hero padding.
space-16	64px	Between web sections.
space-24	96px	Web hero vertical padding.

RADIUS

radius-sm	8px	Inputs, steppers, set rows, small thumbnails.
radius-md	16px	Cards and stat tiles.
radius-lg	28px	Bottom sheets, programme cards, the tab bar.
radius-pill	999px	Buttons, chips, badges, the active-tab pill. Echoes the logo's round caps.

STROKE

stroke-hairline	1px	Concentric background rings and dividers.
stroke-icon	2px	Icons, drawn with round caps and joins.
stroke-ring	10px	Progress rings and the rest timer, round caps, like the logo's arc.

SHADOW

shadow-float	`0 12px 32px rgba(0, 0, 0, 0.6) / 0 12px 32px rgba(14, 14, 14, 0.12)`	Bottom sheets, the floating tab bar, the rest-timer overlay.

OPACITY

echo-1	1	First line of an echo headline.
echo-2	0.7	Second line.
echo-3	0.5	Third line.
echo-4	0.32	Fourth line.
echo-5	0.18	Fifth line and beyond.
ring-faint	0.35	Concentric background rings drawn in accent.

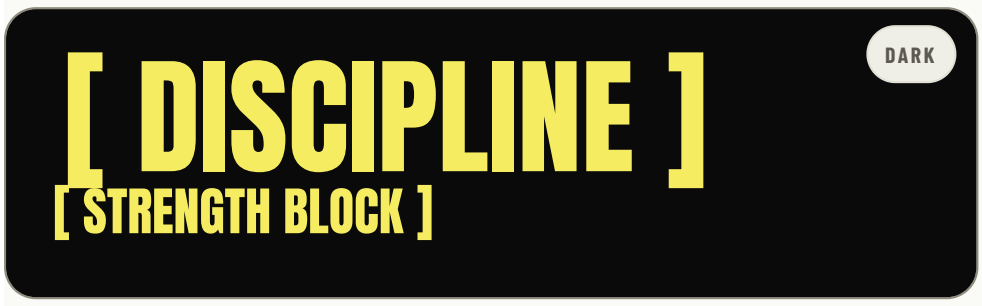

COMPONENTS

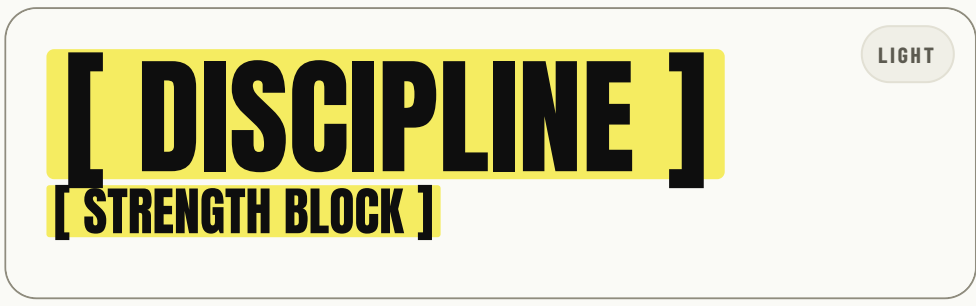

BRACKETTITLE BRAND

The `[ DISCIPLINE ]` device from the posters: one value word in square brackets, in Anton, in `accent`. On light it is ink on an `accent-highlight` yellow band.

Use it for programme names, weekly themes and value statements. One per view. Never bracket a sentence; one or two words only.

Consumer provides: `children`, `size` (`s` 26px, `m` 40px, `l` 64px), optional `as` (heading tag, default `h2`).

ECHOHEADLINE BRAND

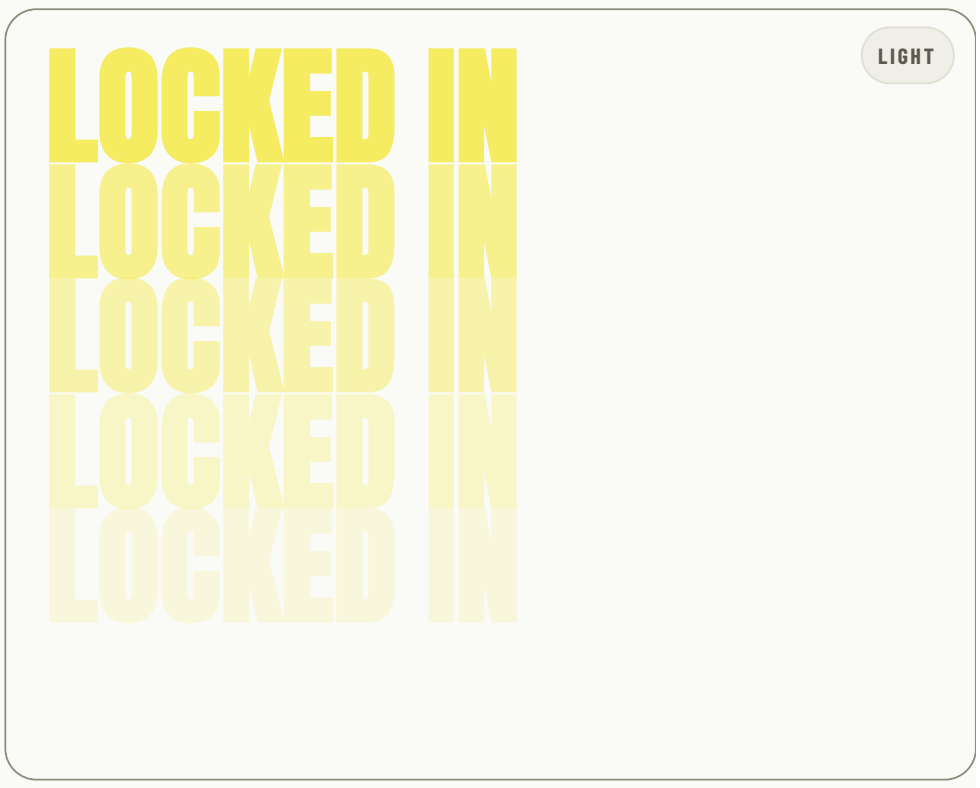

The LOCKED IN device: a short headline repeated down the frame, each line fading through the `echo-1` to `echo-5` opacity tokens. Only the first line is read by screen readers.

The type is `press-yellow` in both themes; light only swaps the ground. On light it is decorative (about 1.2:1), so repeat any message it carries in readable text nearby.

For brand moments only: the web hero, a workout-complete screen, campaign art. Two words maximum, and a photo of an athlete can sit over the lower lines.

Consumer provides: `text`, `lines` (default 5), optional `size`.

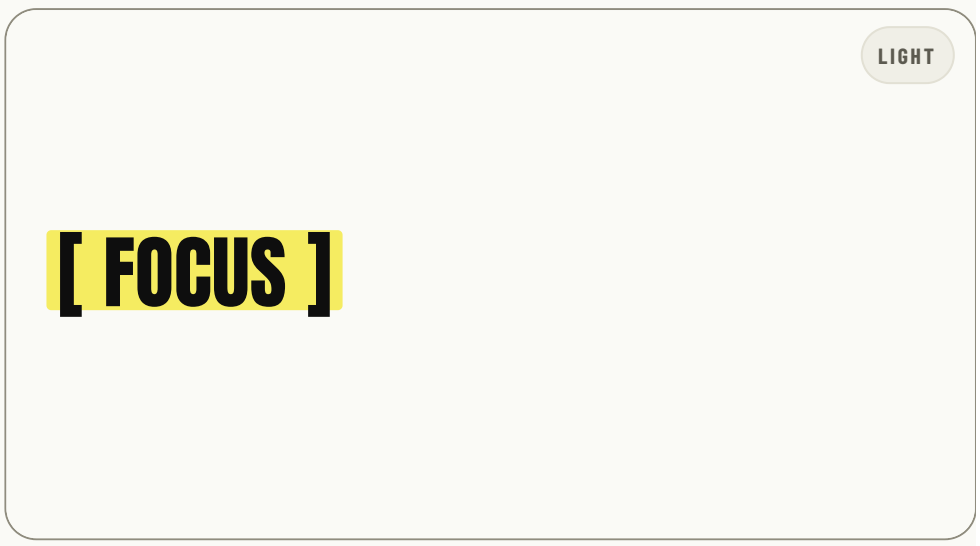

RINGS BRAND

The concentric hairline circles behind the poster photography. Drawn in `accent` at `stroke-hairline`, at `ring-faint` opacity.

Place inside a `position: relative` container, behind content. Centre them on the subject, such as an athlete's head, a timer or a headline, so they read as focus. Use two or three rings, never more than four, and never animate them continuously.

Consumer provides: a positioned parent; optional `count`, `size` (px diameter of the outer ring), `offset` (CSS translate).

TAGLINE BRAND

Challenge · Motivate · Succeed, set in the `label` style. The separators are small rings drawn in `accent`, the dot from the logo.

Use it once per surface: the web footer and hero, splash screen, share cards. Never inside working screens. Pass `words` for a campaign variant with the same three-beat rhythm, and `size` to scale it.

Consumer provides: optional `words` (array of three), optional `size` (CSS length).

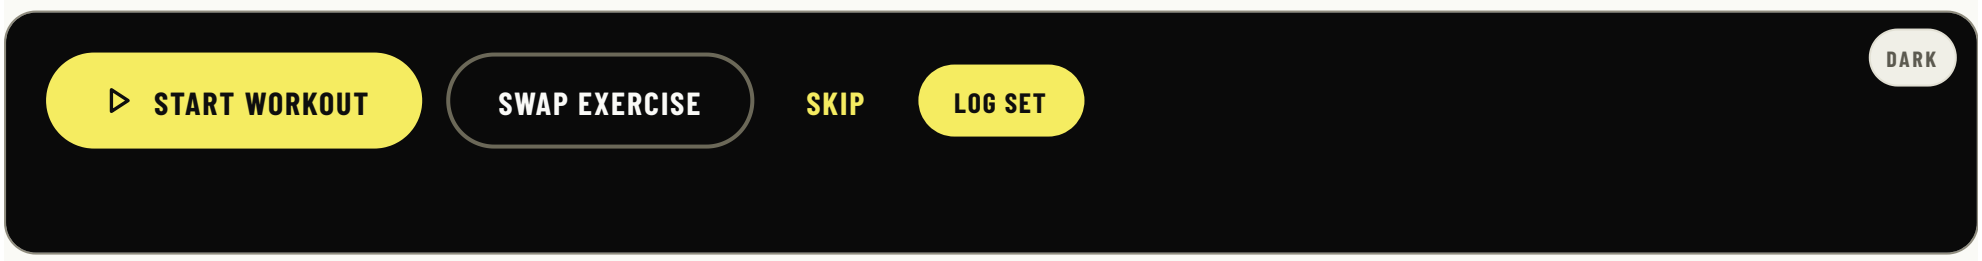

BUTTON ACTIONS

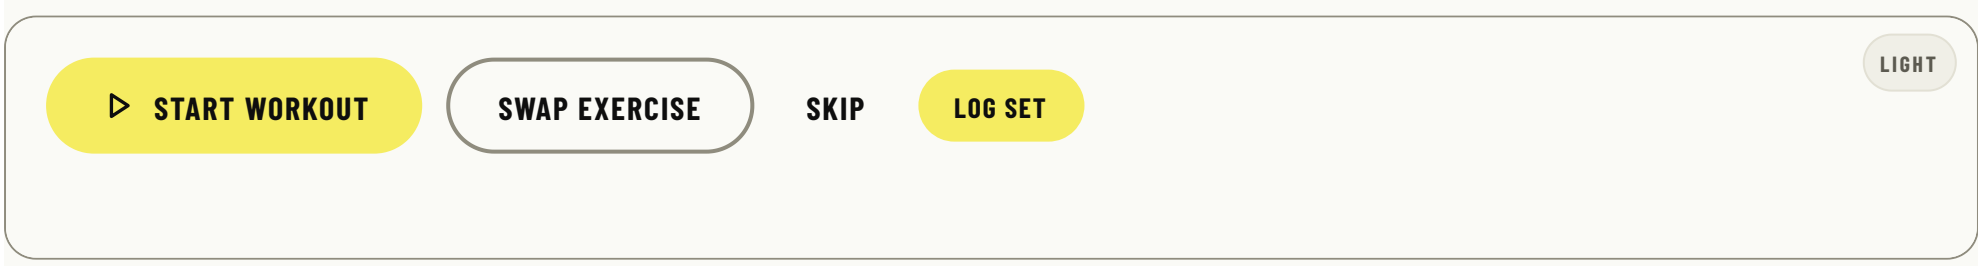

The pill-shaped action control; round ends echo the logo's stroke caps.

- **primary**: `press-yellow` fill, `on-yellow` label. At most one per screen, for the thing the screen is for ("Start workout", "Log set", "Join programme").
- **secondary**: `line-strong` outline, `ink` label. Alternatives and adjustments ("Swap exercise", "−15s").
- **ghost**: `accent` text, no frame. Low-stakes exits ("Skip", "View all").
- Sizes: `sm` 36px (inline in rows), `md` 48px (default), `lg` 56px (the bottom call to action on a phone; pair with `block`).

Labels are verbs in the `label` style, uppercase, two words where possible. No exclamation marks.

Consumer provides: `children` (label), optional `icon` (an `Icon` name), `onClick`, and any native button attributes.

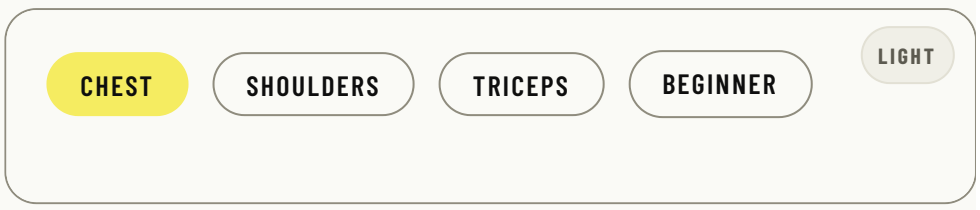

CHIP ACTIONS

Filters and tags: muscle groups, equipment, level.

Pass `selected` (with `onClick`) to make it a toggle: selected chips fill `press-yellow` with `on-yellow` text. Without `selected` or `onClick` it renders as a static tag with a `line-strong` outline. Keep labels to one or two words.

Consumer provides: `children`, `selected`, `onClick`.

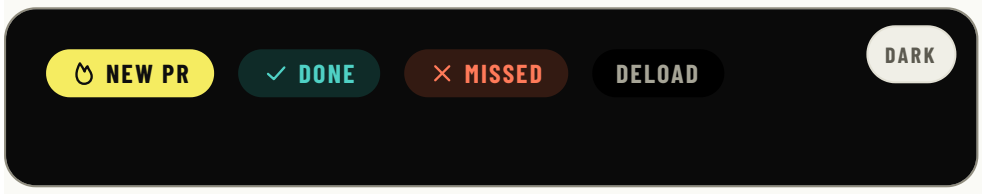

BADGE STATUS

A small status pill. Every tone carries an icon as well as a colour, so no state relies on colour alone.

- `pr`: personal record. `press-yellow` fill with a flame. Celebrate it, sparingly.
- `done`: completed set, session or week. `success` on `success-soft`, with a tick.
- `missed`: skipped session or failed set. `danger` on `danger-soft`, with a cross. Keep the copy neutral ("Missed", not "Failed").
- `neutral`: anything else (deload week, rest day).

Consumer provides: `tone`, `children` (one or two words).

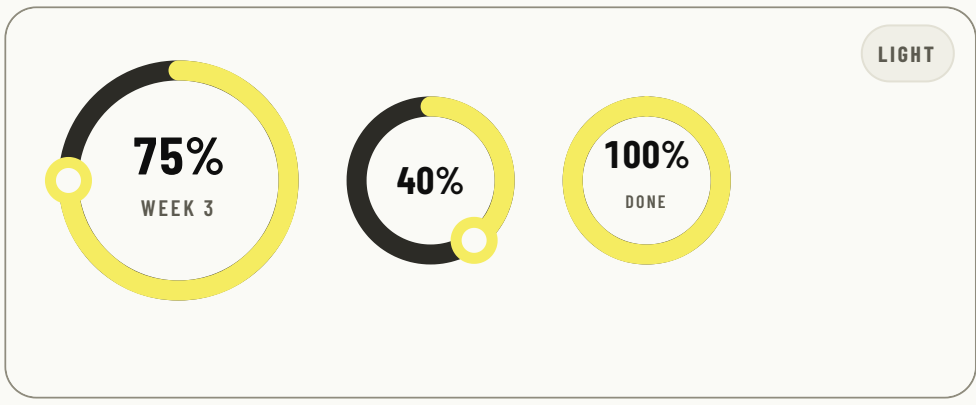

PROGRESSRING DATA

The logo's arc, made functional. A round-capped arc fills clockwise from 12 o'clock, and a small ring rides on its leading end, like the dot at the end of the logo's arc.

Use it for weekly goal, programme progress and workout completion. The arc is `accent-line` (press-yellow in both themes), the track is `ring-track`. Keep the centre to a value and a one-word label. The centre text scales with `size` (value at 20%, label at 8.5%, never below 9px), so it stays inside the ring at any size; don't override its font size.

Consumer provides: `value` (0–1), optional `size` (px), `stroke` (px, default 10, the `stroke-ring` token), `label`, `children` (replaces the % value), `ariaLabel`.

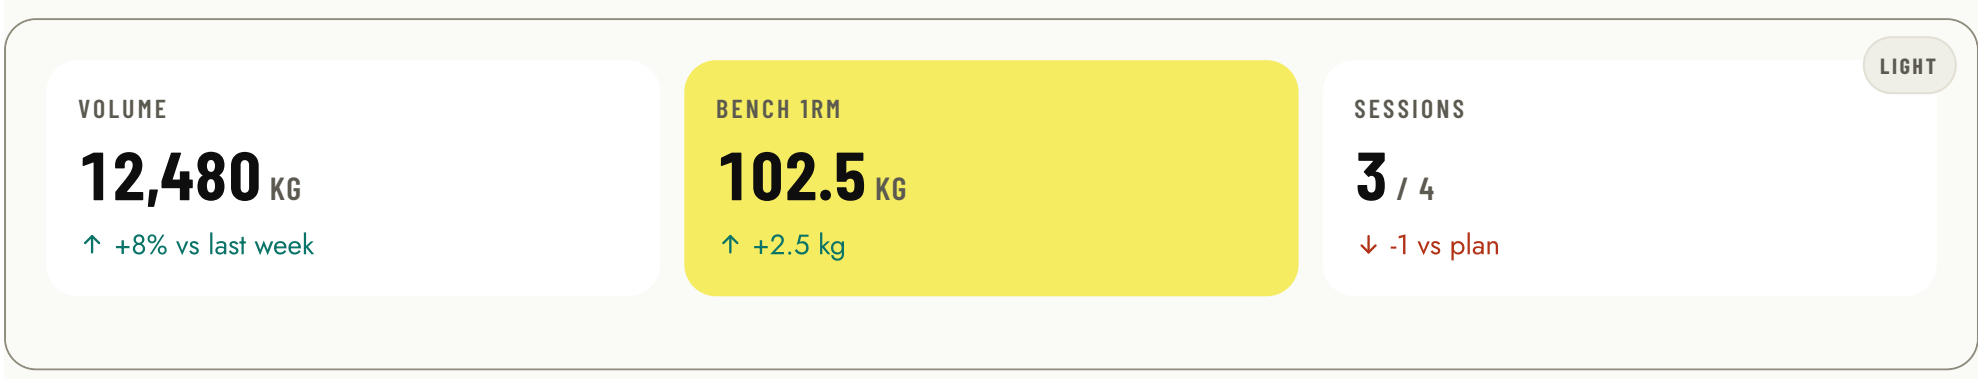

STATTILE DATA

One number with its unit and label: volume, 1RM, streak, sessions.

The value is `stat` (Barlow Condensed, tabular figures); the unit sits beside it in `ink-muted`. `highlight` moves the tile onto `accent-soft` with the value in `accent`. Use it for the one number this screen is about, such as a new PR. A `delta` starting with "-" shows a down arrow in `danger`; otherwise an up arrow in `success`. Override with `trend`.

Consumer provides: `label`, `value` (pre-formatted string), optional `unit`, `delta`, `trend`, `highlight`. Lay tiles out in a grid; the tile fills its track.

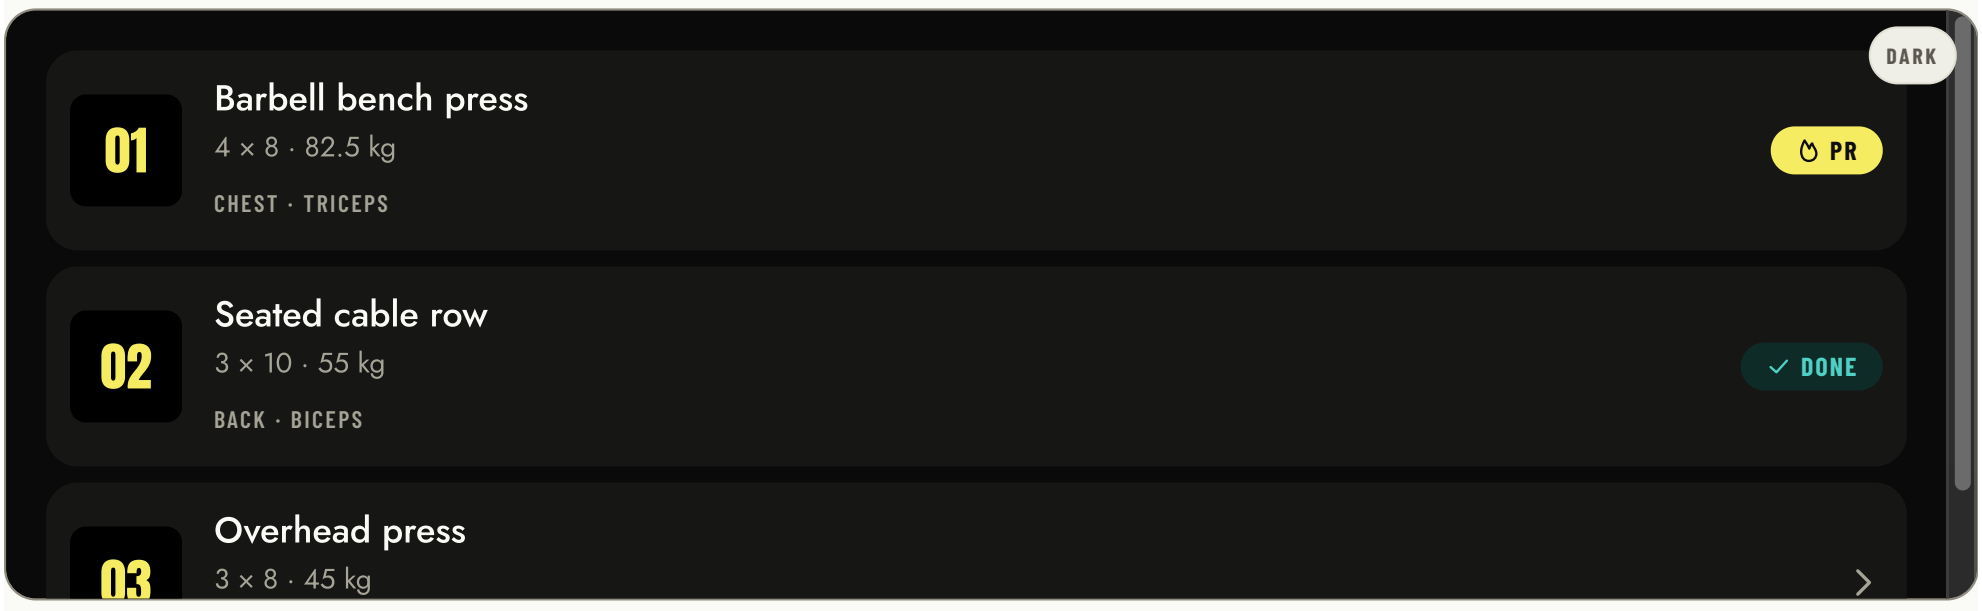

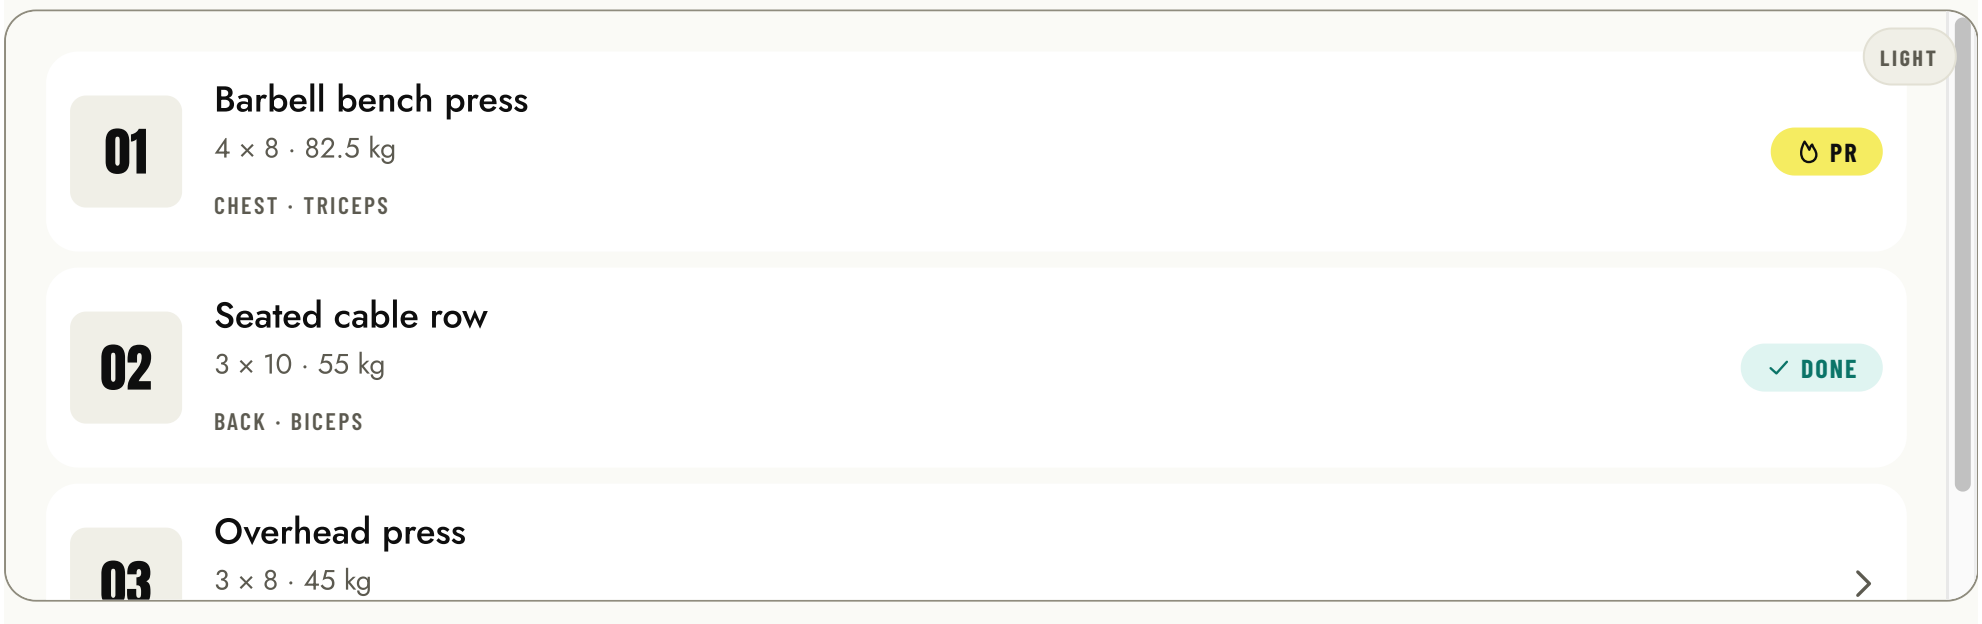

EXERCISECARD WORKOUT

One exercise in a workout or programme list. The order number is set in Anton in `accent`, so the list reads like a plan.

The detail line is "sets × reps · load", for example "4 × 8 · 82.5 kg". With a `status` the trailing chevron becomes a `Badge`. Long names truncate with an ellipsis rather than wrapping.

Consumer provides: `index`, `name`, `detail`, optional `muscles` (array), `status` (`done` | `pr` | `missed`), `onClick` (makes the whole card a button).

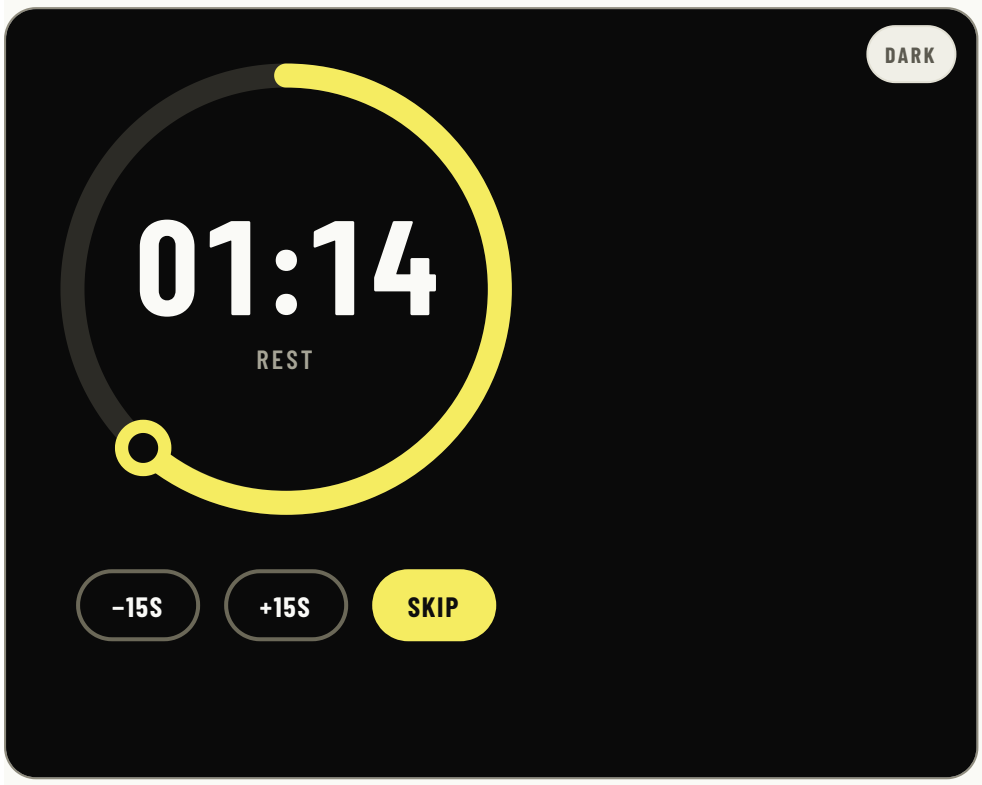

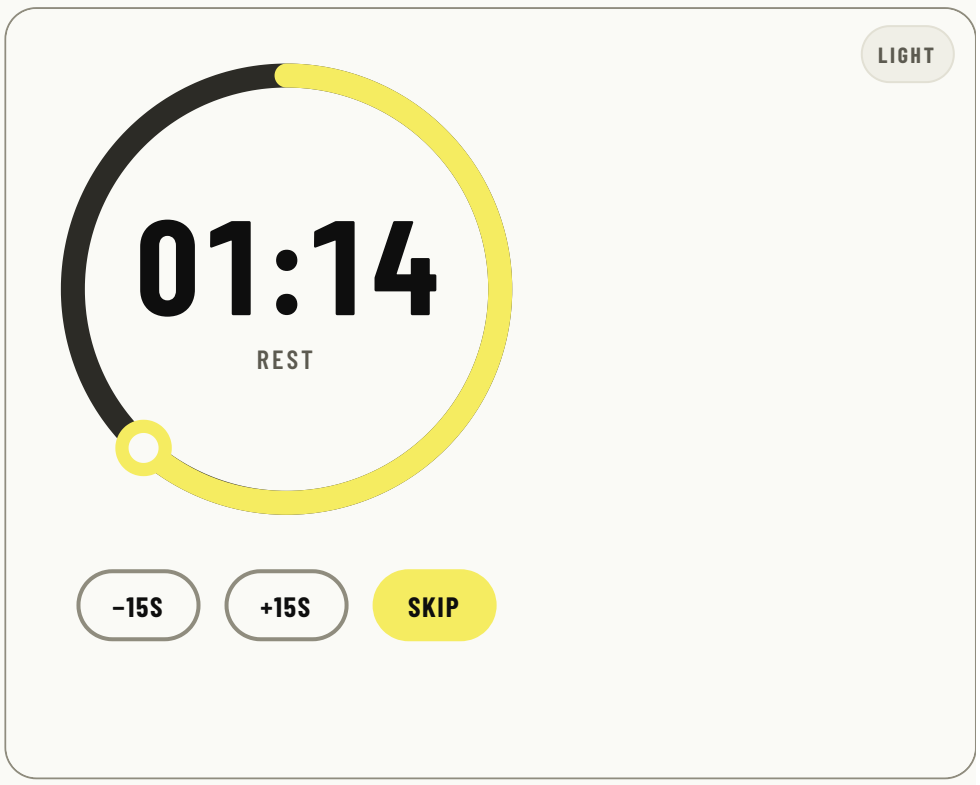

RESTTIMER WORKOUT

The between-sets countdown: a large `ProgressRing` with the time scaled to the ring (28% of `size`: `stat-xl` at the default 240px), plus −15s / +15s / Skip.

Show it as a full-screen overlay or a bottom sheet on `surface-raised` with `shadow-float`. It should be readable at arm's length on the gym floor. When it reaches zero, give a short haptic and sound rather than a flashing animation.

Consumer provides: `total` (seconds), optional `seconds` (start value), `label`, `onSkip`. Ticking down is the app's job; the component holds the value.

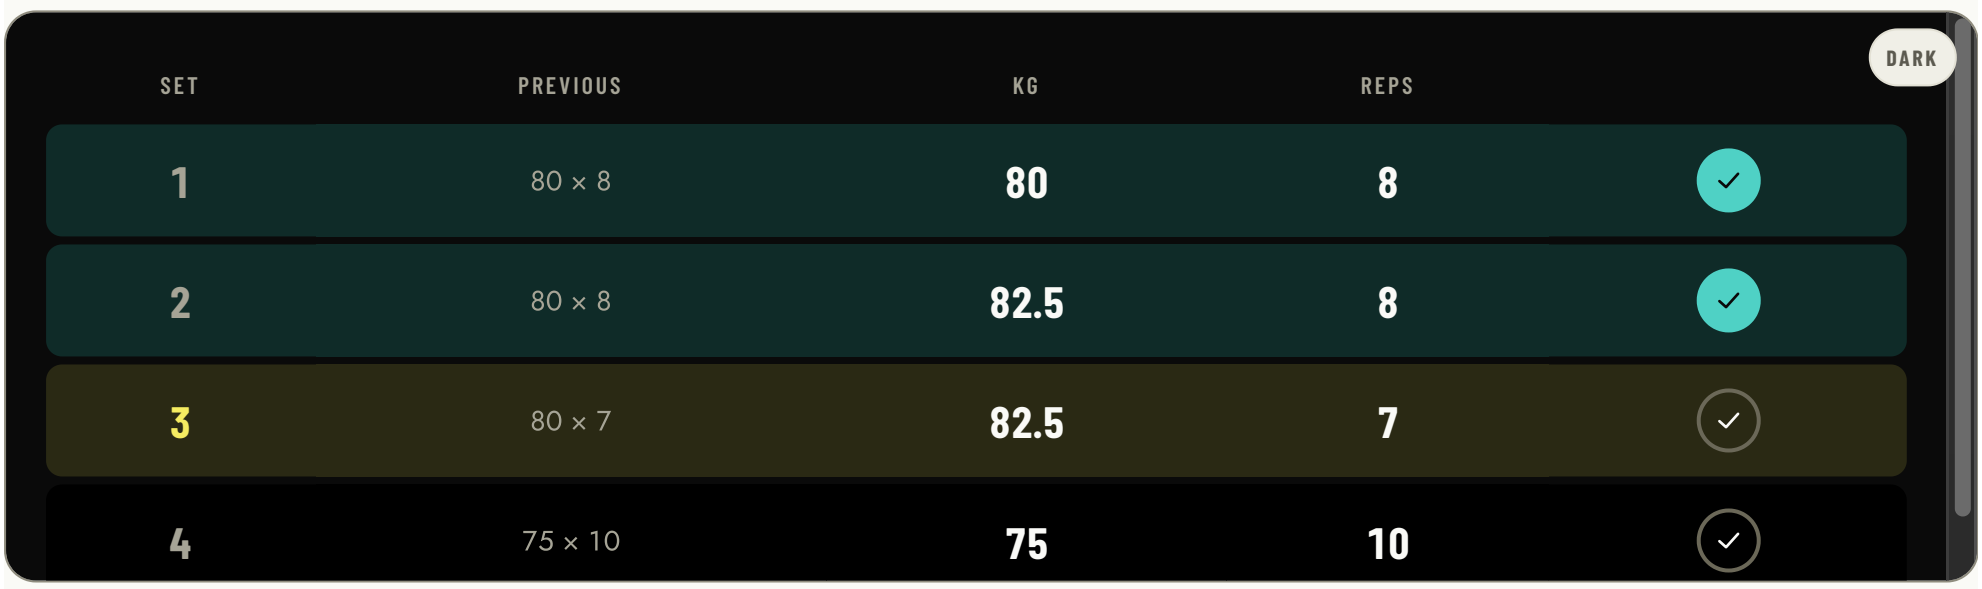

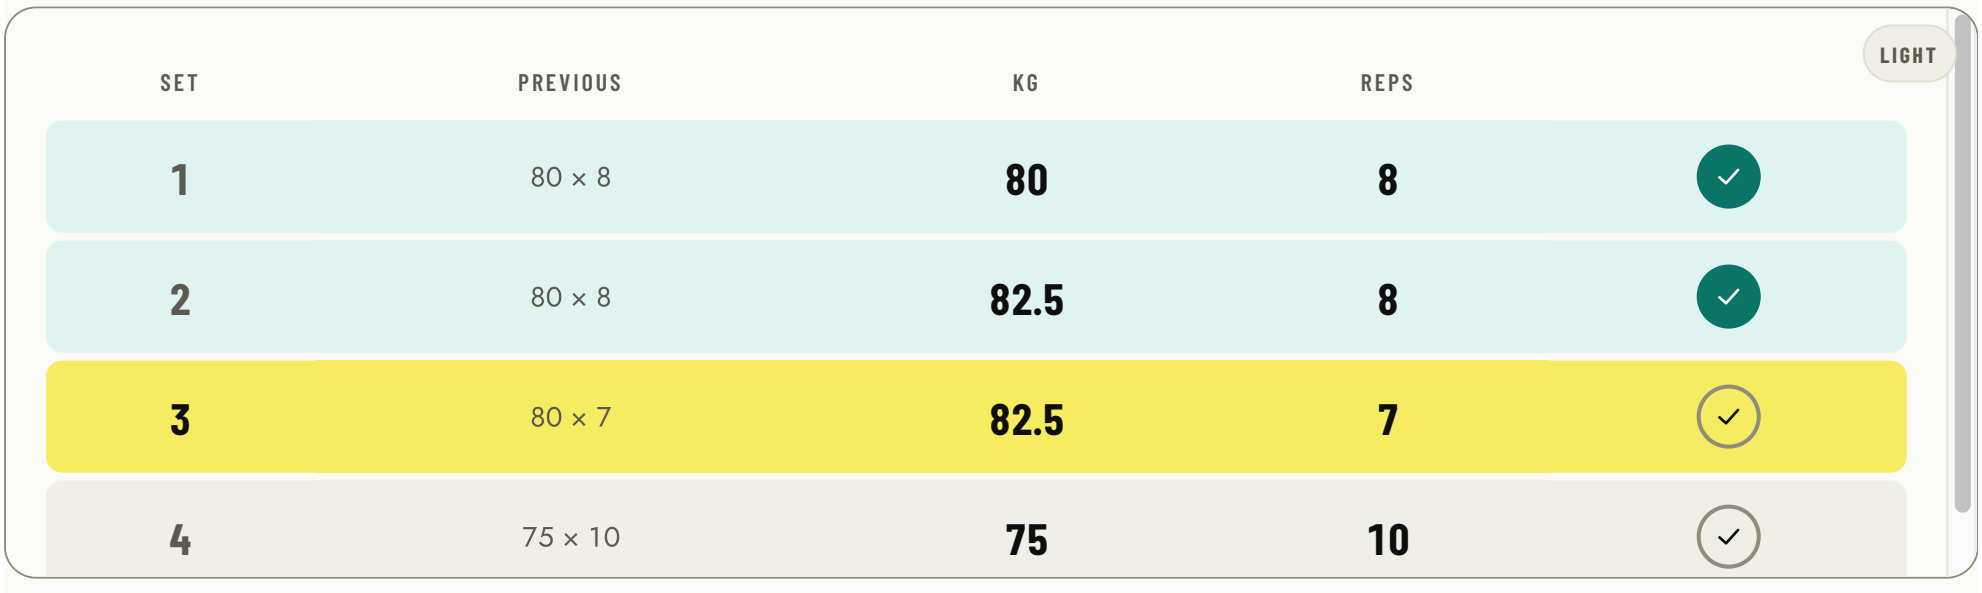

SETTABLE WORKOUT

The set logger: set number, previous performance, weight, reps and a done toggle.

The first unfinished set is the current one, shown on `accent-soft` with its number in `accent`. Done sets move to `success-soft` with a filled `success` tick. Previous values sit in `body-sm` and `ink-muted` so today's numbers lead. Tapping a weight or rep cell should open a `Stepper` in a sheet.

Consumer provides: `sets` (`[{ prev, weight, reps, done }]`), optional `unit` (default "kg"), `onChange`.

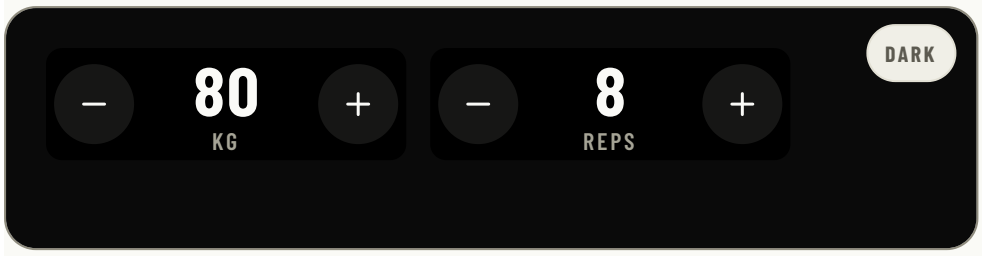

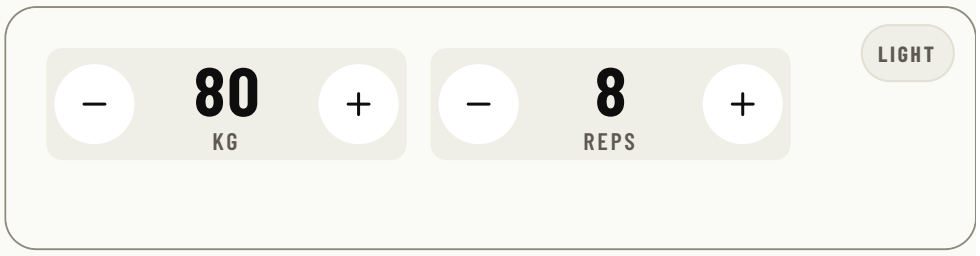

STEPPER WORKOUT

Weight and rep entry with big targets for sweaty thumbs. The value is in `stat` with tabular figures, and the – / + buttons are 40px circles.

Default weight step is 2.5 kg, matching standard plate pairs; reps step by 1. Always show the unit.

Consumer provides: `value`, `step`, `unit`, optional `min`, `label`, `onChange`.

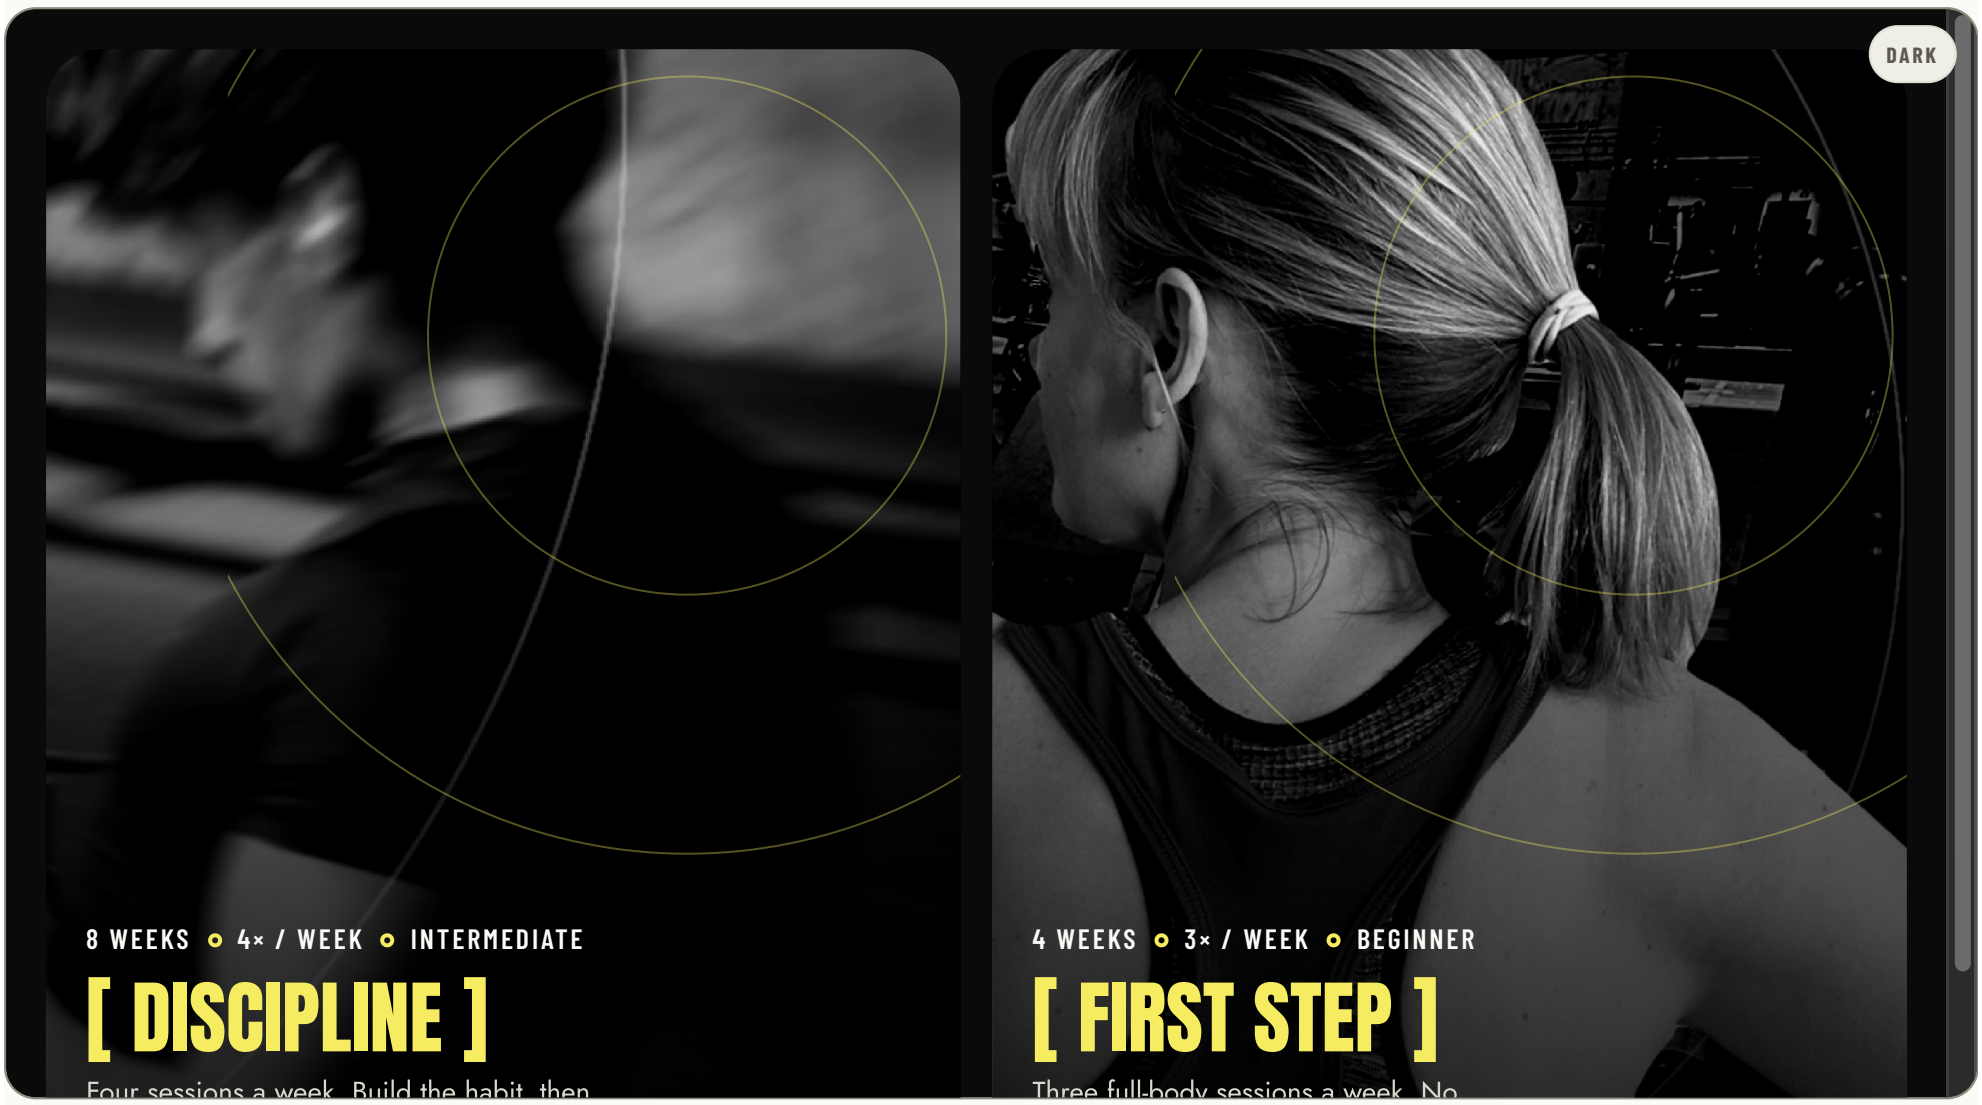

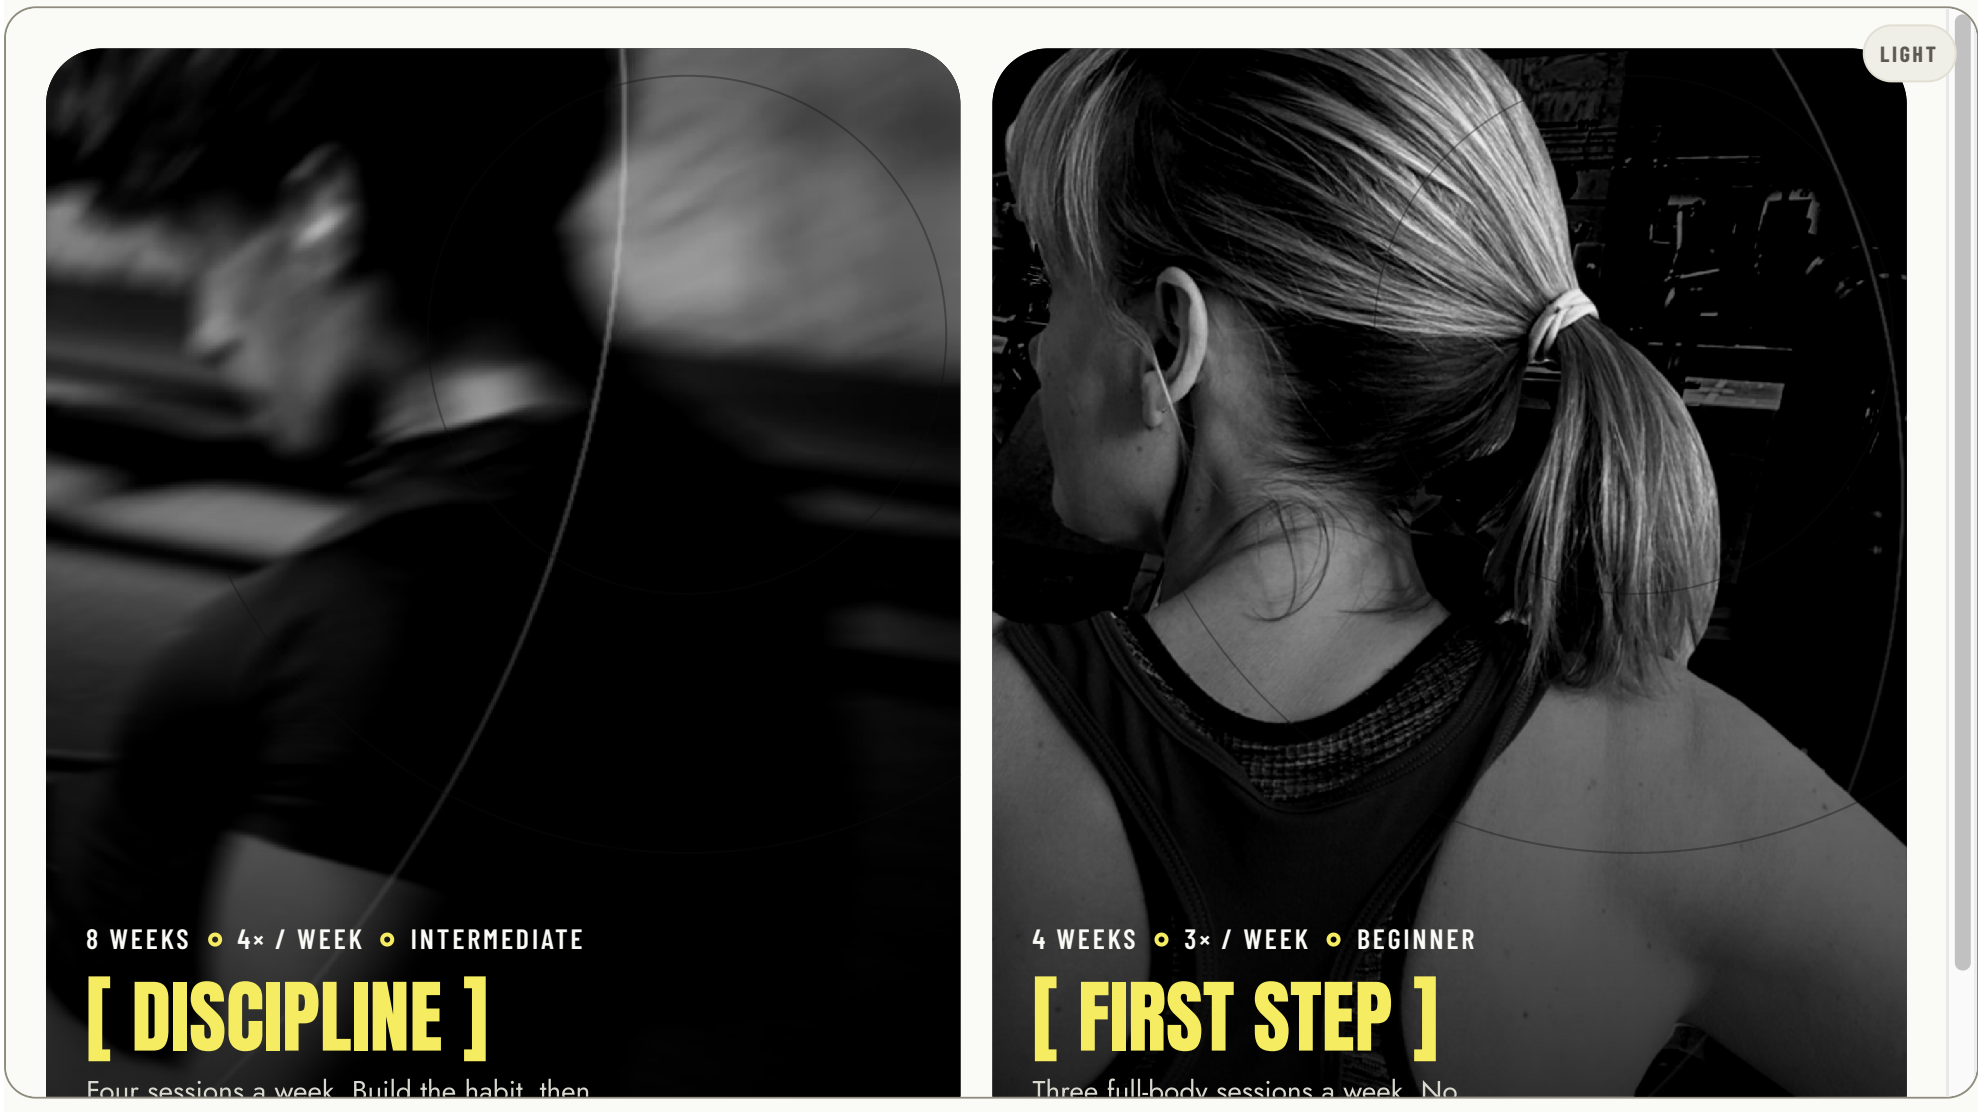

PROGRAMMECARD CONTENT

A guided programme on a black-and-white photograph, with its name as a `[ BRACKET ]` title. This is the poster language at card size.

The photo is forced to greyscale with a `scrim` gradient at the base, so `press-yellow` and white type always read. The rings sit off-centre over the image. The card is always dark, whatever the theme: it is a piece of the poster, not a surface.

Consumer provides: `title` (one or two words), `image` (URL of a photo of a real person training, ideally 4:5), `imageAlt`, optional `weeks`, `perWeek`, `level`, `description` (one sentence), `action` (e.g. a `Button`), `rings` (false to hide).

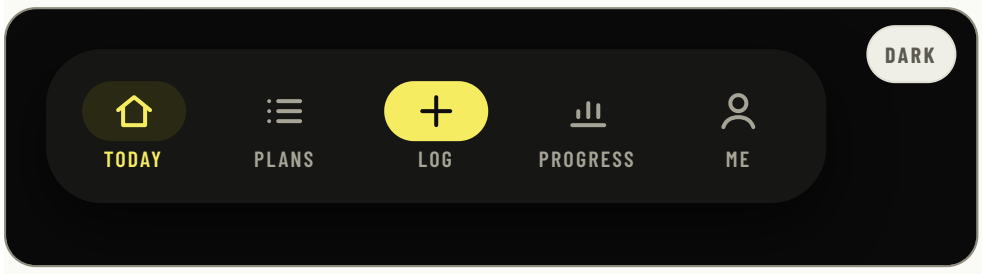

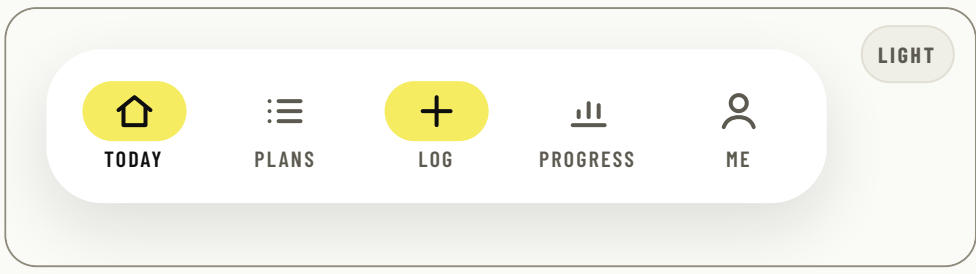

TABBAR NAVIGATION

The app's floating bottom navigation: Today, Plans, Log, Progress, Me. "Log" is the primary action and always sits in a `press-yellow` pill. The active tab gets `accent` with an `accent-soft` pill behind its icon.

Float it `space-4` above the bottom safe area, with `space-4` side gutters, on `surface-raised` with `radius-lg` and `shadow-float`. Hide it during an active workout, where the workout's own controls take over.

Consumer provides: optional `items` (`[{ id, label, icon, primary }]`), `active` , `onChange` .

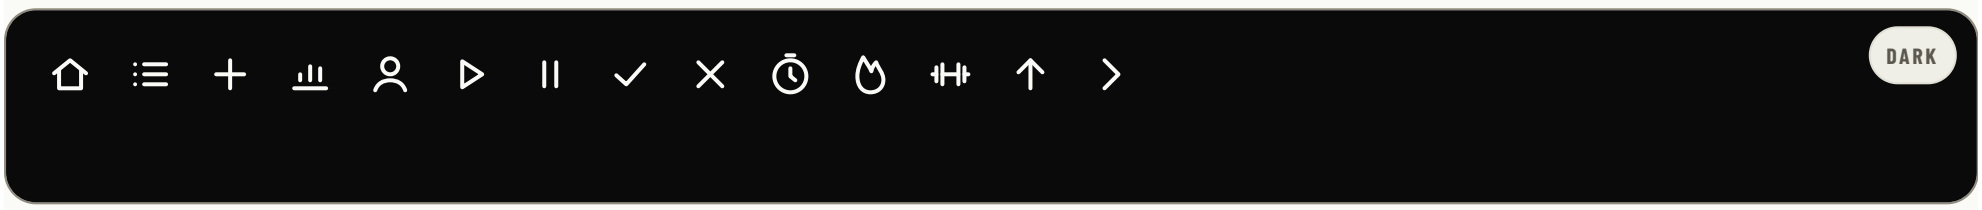

ICON FOUNDATIONS

A small line-icon set drawn to match the logo: a 24px grid, 2px stroke (`stroke-icon`), round caps and joins. Icons take `currentColor` .

Names: home, list, plus, minus, chart, user, play, pause, check, x, timer, chevron-right, arrow-up, arrow-down, flame, dumbbell.

Consumer provides: `name` , optional `size` (px, default 24), `title` (gives the icon an accessible name; leave it out when a visible label sits beside it).

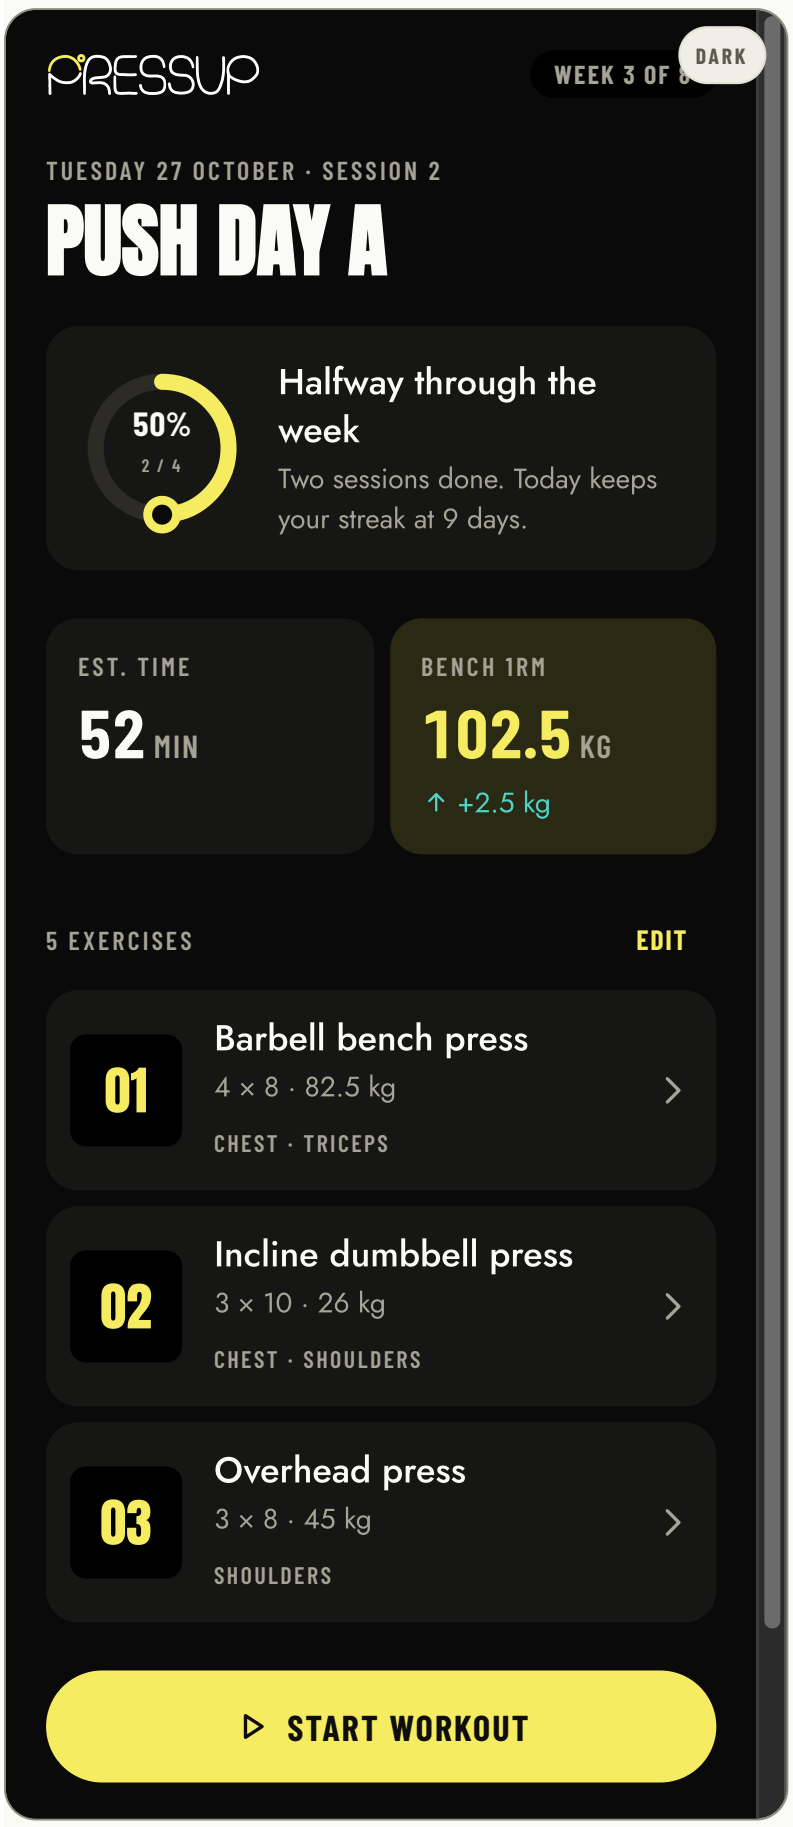

5

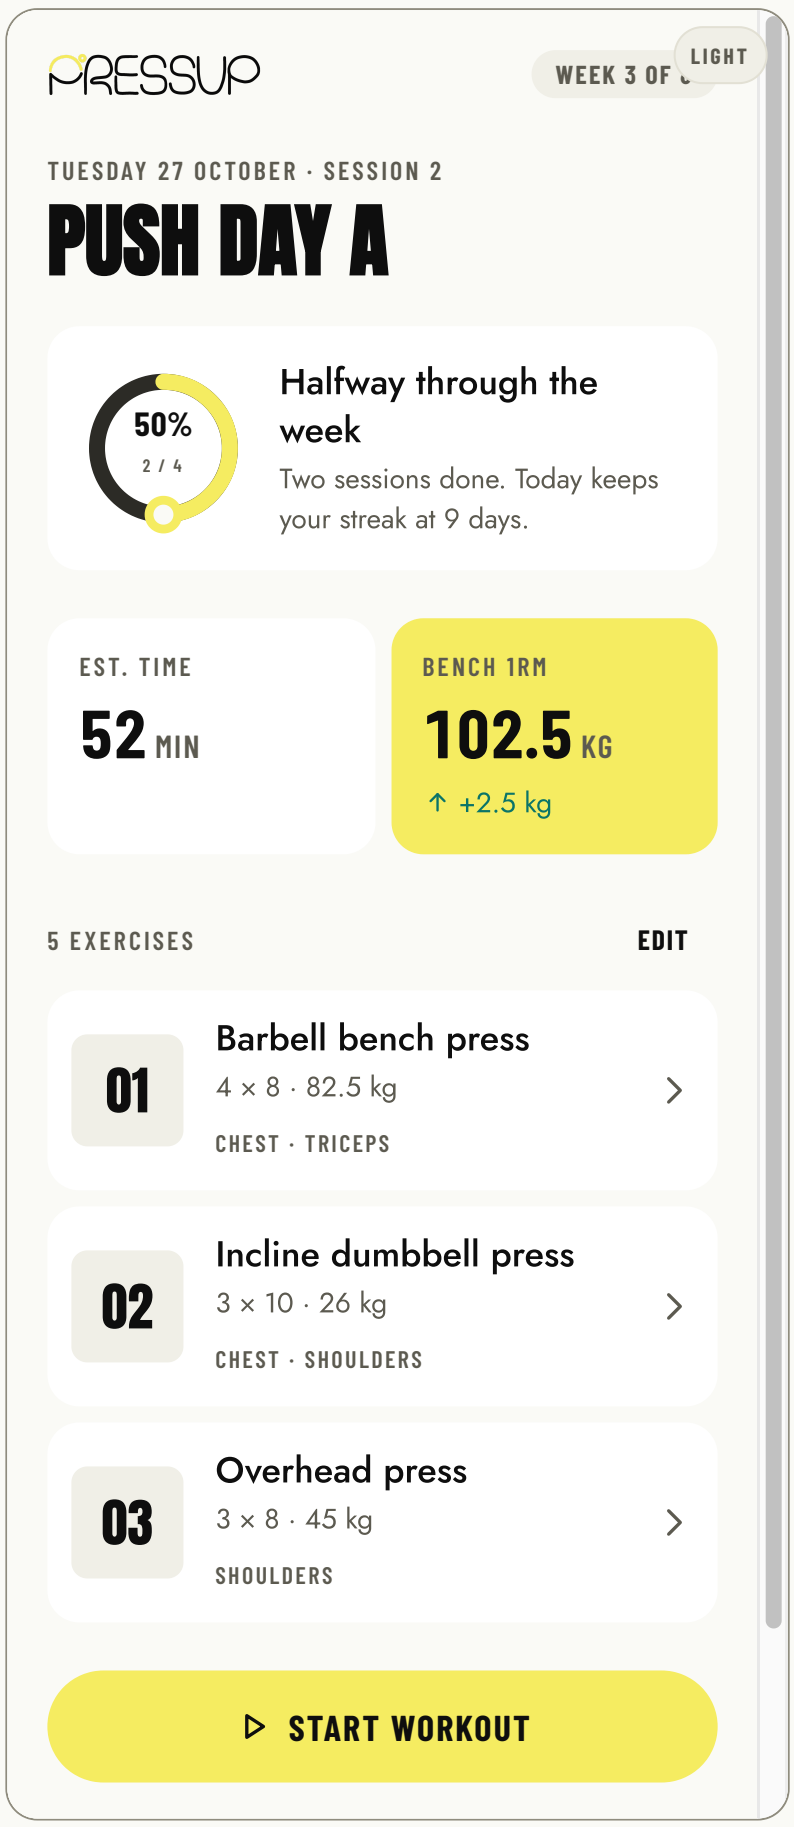

EXAMPLE SCREENS

TODAYSCREEN APP

An example app screen, not a component: the Today tab, assembled from the system.

It shows the working-screen register. There's one display headline (`display-m`), the rest is Jost and Barlow Condensed, yellow appears only on the primary button, the active tab and the progress arc, and nothing is decorated. Phone gutter is `space-5` ; sections are `space-6` apart.

WORKOUTSCREEN APP

An example app screen, not a component: mid-workout, logging set 2 with the rest timer running.

This is the calmest screen in the app. There's no display type, the numbers are large and tabular, and the tap targets are 40px or more. Yellow marks only progress and the current set. The tab bar is hidden while a workout is active.

WEBHERO

WEBSITE, DARK ONLY

An example website page, not a component: the home page hero, proof strip and footer.

The website is the brand-moment register. Echo headline in `display-xl` press-yellow, black-and-white photography with rings, the tagline and figure pattern in the footer. The site is always dark, so this example ignores the light theme on purpose. Desktop gutter is `space-10`, the max content width is 1200px, and sections are `space-16` apart.

LOGO AND ASSETS

LOGOS

The PressUp logo is one round-capped line: the lower bowl of a P in white, and a yellow arc with a ring on its end, a figure mid press-up. These are transparent PNGs cut from the 300 dpi master.

- `pressup-wordmark-on-dark.png` : yellow arc and white letters. The default, on `surface` (dark), black photography and the web.
- `pressup-wordmark-on-light.png` : yellow arc and ink letters, on light `surface` at 32px tall or more. Smaller than that, the yellow arc is too faint on white, so use mono-black.
- `pressup-wordmark-mono-white.png` : all white, over busy photography.
- `pressup-wordmark-mono-black.png` : all ink, on a `press-yellow` fill, on small light placements, and for one-colour print.
- `pressup-mark-*.png` : the P mark alone, in the same four inks. App icon, favicon, avatar and social profile. Min size 24px.

Clear space: the height of the mark's ring on all sides. Never recolour the arc, outline, stretch, add effects, or set the wordmark in a font.

pressup-mark-mono-black.png

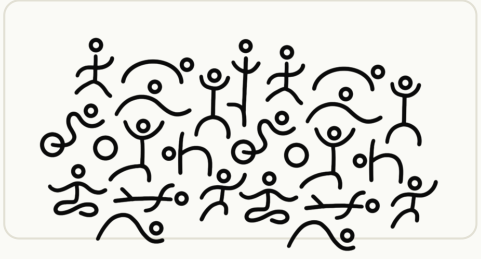

GRAPHICS

`pressup-figures-*.png` : the hand-drawn figure pattern, about thirty stick figures running, stretching, lifting and doing press-ups, drawn with the logo's round line. In press-yellow, black and white inks.

Use it for empty states, onboarding, the web footer, merch and packaging. Use it at one scale, as a block, and never mix it with photography in the same frame. Not for working screens.

pressup-figures-yellow.png

pressup-figures-black.png

pressup-figures-white.png

IMAGERY

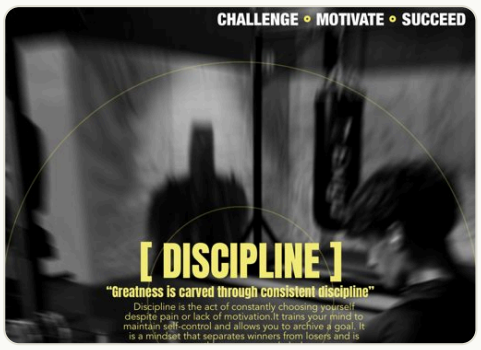

Photography is black and white, high contrast and shot in real gyms, of real members mid-effort. Yellow is the only colour that ever touches it, as type or rings.

- `take-the-first-step.jpg`, `discipline.jpg`, `locked-in.jpg`, `focus.jpg`: the reference posters. Copy their composition, not their files.
- `photo-shoulder.jpg` (3:4), `photo-row.jpg` (1:2), `photo-row-wide.jpg` (16:9): text-free crops of the poster photography for cards and hero placeholders. Swap them for proper shoots when available.

Use: desaturate fully, push contrast, and add motion blur to show effort. Avoid stock smiles, colour photos, posed mirror selfies, and brand logos on kit.
